This is a wall mount for Guition ESP32-S3-4848S040 ESP32-S3 based touch screen, which can be purchased without the relay base.

The relay base doesn't fit in a standard 60mm diameter appliance wall box, so if one doesn't really need the relays there, with this wall plate it becomes possible to attach it above the box. Holes are enlarged so slight position compensation becomes possible as with any standard appliance.

It's shifted downwards because this way the 8-pin socket on the motherboard can safely hang into the box, so a connector plug with appropriate pins can be used comfortable.

It's also positioned with the USB-C and SD sockets downwards, if placed with the shift downwards. This may require rotation of the picture in the software.
